Suggested article description(s) for enactment (including appropriate HTS subheading(s)):

AC electric motors of an output exceeding 74.6 W but not exceeding 85 W, single phase; each equipped with a capacitor, a speed control mechanism, a motor mount of plastics and a self-contained gear mechanism for oscillation (provided for in subheading 8501.40.40).

 ☐ Different from that in bill as introduced (see Technical comments section).

Product information, including uses/applications and source(s) of imports:

An electric motor converts electrical energy into mechanical motion. An alternating current (AC) motor typically consists of two parts: (1) an outside stationary stator having coils supplied with AC current to produce a rotating magnetic field, and (2) an inside rotor attached to the output shaft that is given a torque by the rotating field. AC electric motors can be used in a variety of finished products (e.g., medical equipment and household appliances). However, the subject of this request is a specific type of capacitor-start single phase AC electric motor assembly used to power pedestal-type oscillating portable electric fans of 16 or 18 inches. The principal import source for such motors is China.

⁴ These proposed bills include similar products that vary in wattage range.

⁵ The subject products were covered by a temporary duty suspension under heading 9902.85.06 through the end of 2009.
